

LMU Baseball Fieldhouse

Westchester, California

Client: Loyola Marymount University
Architect: Howard Parsell Company
Budget: \$448,000
Size: 8,000 SF

Located along the first base line of LMU's Page Stadium baseball field, this fully insulated, pre-engineered metal building has stucco-like textured wall panels with a interlocking seam and concealed fasteners. Portal frame bracing was designed to accommodate the use of eight sectional doors with clear Plexiglas panels, allowing users of the indoor pitching, batting and weight training areas to fully view the outdoors. Skylights and energy efficient high bay fluorescent lighting fixtures gives the structure a bright and airy feeling.
